Used by hundreds of financial institutions worldwide, Auditview® is a powerful audit analysis and reporting application for HP NonStop® systems. Auditview® is designed to efficiently analyze, extract, and integrate important audit information captured by Safeguard, CSP PassPort®, and other CSP products. Auditview® is available stand-alone or as a sub-component of Protect XP®.

#### Key Features:

- Powerful reporting tool for Safeguard Audit
- Standard reports for quick results
- Easily customized reports for more specific needs
- Special reports for statistics, export, detail, summary, etc,
- Extracts and condenses Audit information using an "accumulate" function
- Presents only key information as required
- Able to integrate Safeguard and CSP PassPort® Audit data in single report

### Interface and Reporting Options

Auditview® can be run in three modes:

- 1.) Interactively from a TACL prompt
- 2.) In a batch configuration from a TACL prompt or via any scheduler, including the one bundled within Protect XP®
- 3.) Via the Auditview® interface available in the Protect XP® graphical user interface (GUI)

From the GUI, you can design your own reports using drop down menus to add and remove fields. Alternatively, you can copy an existing canned report included in the installation and modify it for your own requirements. When initiating any report, you can enter selection criteria such as specific user names, terminal names, etc so that only audit events pertaining to these criteria ("When has DEVT.MANAGER logged on") are including in the report. Generally, reports are sent to the HP NonStop® server where they can be printed or downloaded via CSP SpoolView, the graphical interface to HP NonStop® spoolers included in many CSP applications. From SpoolView, sections or complete reports may be printed, e-mailed, exported as HTML, etc.

# Auditview®

## Strong Audit Reporting

### Customized Reporting

Auditview® supports many different levels of reporting, from general logon and activity reports to more specific statistical and configuration reports. Auditview® comes with a complete set of initial reports scripts that can be easily customized or extended to meet any audit reporting need.

In addition to Safeguard audit information, Auditview® also extracts Telnet IP information from EMS logs and matches this information to the corresponding Safeguard audit record. This greatly enhances the audit information on the terminal and user activity that is unavailable from Safeguard Audit Trails.

#### Key Benefits:

- Completely customized reports to satisfy any Audit requirement
- Provides complete composite view of system audit information
- Condenses Safeguard Audit trails to reduce online storage requirements
- Automates regular scheduled report executions
- Single source for all NonStop® Audit information
- CSP technical support available to create custom reports
- Fully integrated with Protect XP®
- Itanium® Ready
